

SIP-1132™

Rejuvenating Fog Seal

Penetrates Deeply

Measureable improvements to ΔT_c , m-value, and performance grade – at least ½" into the surface!

Non Tracking

Dries clear, absorbs quickly

No Restriping

We have the reflectivity data to prove it!

Fast Skid Rebound

Safely resume traffic in 1 hour

As tested by the
NRRA National Road Research Alliance
Project 202306

case study

"The penetrating fog seal helped lock in surface fines and keep our striping on the pavement, so we're seeing stronger early retroreflectivity and fewer paint callbacks."

— Joel F., Senior Pavement Engineer

Who?

State DOTs, Private Roadway Owners, County Engineers in MN, IL, and IA

What?

Rejuvenate the asphalt surface 1/2" into the pavement surface. Re-open to traffic in 1 hour.

Chemical reactions **permanently** modify aged and oxidized asphalt for long-lasting repair!

RESULTS

BENEFITS

Turn-key with existing spray applicator systems.

Ready for traffic in 1 hour! Non-tracking and rapid skid rebound. *Safety first - always check friction.*

Cool weather compatible, apply as low as 40 °F and rising!

Dries clear, maintains pavement marking reflectivity!

Restores durability and improves longevity

No odors!
